When you update your Android phone or tablet, you get the latest bugs, general performance and stability improvements, and possibly new features. You can update your Android device quickly, simply, and for free, and we'll show you how. Device manufacturers provide the latest software updates over the Internet. Therefore, you will connect your phone to a stable Wi-Fi (or mobile network) and then it will download and install all available updates. The phone will reboot at least once for the installed updates to take effect. Related: What's the latest version of Android? Update your Android phone or tablet. Since different Android device manufacturers use different setting names, your device may show a different setting name than what we have shown below. However, you will get a general idea of which option to choose on your device. Advice. To find your current version of Android, read our guide on this topic. Launch "Settings" on your Android phone or tablet to start the process. Scroll down to the "Settings" section and select "system". On the page, select System Updates. Your device will automatically start checking for the latest updates. If an update is available, you will see it on the screen. Note. Over time, all Android devices stop receiving updates. If your update support period has expired, it's time to replace your Android phone or tablet. Click the "Download and Install Now" button to get the update and install it on your device. Wait for your phone or tablet to load the update. As soon as it is done, your device will install it automatically. This may take some time, so be patient. Then your device will restart and the changes will take effect. You are now using the latest version of Android for your device. Enjoy! Updating Samsung Android Devices To update Samsung Android device, please run device settings first. Then click "Update". Check for new updates by clicking and installing. Then select "Download" then "Install" to get the latest updates. Installed on your phone or tablet. Wait for your device to reboot, then you will be running the latest version of Android. Congratulations! After updating the operating system, you need to update the installed Android apps such as Tiktok, Instagram and Outlook. If you have an Android device, you know that Android regularly releases operating system updates. In iOS, Android system update not only improves the functionality of the device, but also offers many new features and improves all the errors of the device. Android devices Samsung, Google, Huawei, Xiaomi and so on. Since it comes from different manufacturers, the device update may vary. However, there are some things you need to do to prepare your Android device before upgrading. These include: Backup all data on your Android phone. This will prevent data loss if something goes wrong. Make sure the battery is at least 50 %. Connect your Android device to a power supply. Make sure your device has sufficient storage space. If you do not have unlimited data plan, connect your device to a reliable Wi-Fi network. What is the latest version of Android? The latest version of Android is 12.0. It was first released on October 19, 2021 on Google Pixel devices and was released this year in Samsung Galaxy, OnePlus, Oppo, Realme, Xiaomi, Techno, Vivo and others. Unlike other Android versions called Sweet, this version is known only for the "Android 12" version number. Like Android 11, the redesigned widgets at Android 12 bring many new features, including a new design language, a privacy board desktop and the privacy board and much more. 12? This article is here to show how to control the Android version of your device and how to update your Android version. Open and check. Before updating your device to the latest Android version, you can check the current Android version running on your device. It is very easy to do, just follow these steps: Step 1: Open the notification panel of your Android device and tap the gear icon to open the Settings application. Be "on the device". Run Oreo, in this case call the system. Step 3: You should see the version under the Android version. System update section. How to update the Android System [4 Road] Method 1: How to update Android using the system update OTA (invisible) You will be informed when updates are available for your Android device. Here, you can select an action to update your Android device to the latest version. If you don't get the request The reason why you can update android version manually with system update or software update. Follow these steps: Connect your Android device to Wi-Fi network and go to settings. Scroll down and select the phone on your phone or a matching option for your device. Click on System Updates or similar, then select "Download and install" and the device starts searching for updates. If an update is available, you will find the download option. Tap on it and your device starts downloading the update. Option 2: How to update Android using a computer You can go to a device manufacturer's website and update Android to the latest version using your computer. Here is a step-by-step instruction showing you how; Step 1: Open the browser on your computer and visit the device manufacturer's website. If you don't know the exact web address, you can Google the model name of your device. Step 2: Find the customer support option on the website and click on it. Here you should find various options for your devices, including software. Check if the update is available. Step 3: If so, download the device manager software on your computer. Device management software varies from manufacturer to manufacturer. Step 4: Open the folder after registration and make updates. Step 5: Now connect your Android device to your computer and find the update command in the device manager software. It is usually available in a separate tab or drop down menu. Step 6: The connected device starts updating as soon as you click on the command. Follow the onscreen instructions and complete the update process. After the process has completed, separate the device from the computer and restart it. The latest version of Android is now running on your device. WEG 3: How to update Android with package update. If you can't find the system update in your device settings, you can update the Android version via the update package from the manufacturer's official website. You will usually find the latest system update package in the production support page's download area. Go to Android and download the available update package in your phone memory. Open the Settings app and go to the phone. Click System Update or Software Update, your phone should display the available package phone memory. Click "Continue" to install the update. Then restart your phone to complete the Android update. Method 4: How to Update Android with Root To get the latest Android OS, you can also root your Android phone. Rooting gives you full control over your phone and access to updates at any time. To root your device, you must first download Android root software. Then follow these steps to update your Android phone: Download and install Android root software on your computer. Launch the program and connect your Android phone with a USB cable. Follow the onscreen instructions to root your device. Restart your device to access and update the latest version of Android. How to Update Android Automatically Android updates are pushed to your device automatically in most cases. But you must enable this feature in your device's "settings" to receive automatic updates. Here's how to enable automatic updates on your Android device; Tap the gear icon to open the Settings app on your Android device. Scroll down and select "firmware update". Depending on your device, you should see an "Auto-download over Wi-Fi" option. Enable the switch next to enable automatic updates. Once you do, Android will automatically update your device as long as you're on a Wi-Fi network. Other Android Update FAQs 1. Why can't I update my version from Android? There are several reasons why you cannot update your Android device. This may include insufficient battery charge, insufficient storage space, or the device is not compatible with the new update. If you think you can't update your Android device using any of the above methods, try removing some apps or transferring some media files on your computer to free space. You can also search on Google to see if your device is compatible with the latest version of the Android operating system. 2. When will I get the latest version of Android? You should receive a notification on your phone when a new version of Android is available. If you have a Pixel device, you'll be notified when an update is available, usually a few days after it's released. If you have another type of Android device, you'll get a notification when your carrier starts rolling out updates. In general, newer devices tend to wait longer for updates and sometimes don't receive updates at all. Devices may also lose some updates, or you may get most other devices later. To check the refresh policy, you should check the device manufacturer's website. Bonus Suggestion: Before starting the Android 12 update, make a backup before the Android system starts the update process, it's always a good idea to backup your Android phone/tablet if anything happens with the update. Connect your Android device to your computer and save your photos, videos or important music files. For backing up contacts and text messages, we recommend you try Fucosoft Android Data Recovery. This third vehicle also includes a backup feature that allows you to selectively back up people, messages, calls, photos, videos, sounds and documents. Download and try. The result is really simple and easy to update your android phone. You can do the previous steps. The instructions in this article can be applied to all Android phones including Samsung, Google, Huawei, Xiaomi, Oppo, OnePlus and more. Unfortunately, if you lost important data during the update, you can also rely on Fucosoft Android Data Recovery to recover the loss data. This tool can help you recover people, short messages, WhatsApp and other data as well as deleted photos and videos on Android. data.
